

Energetic Trade-off	
Response Variable(s)	Growth rate
Details	<p>Growth rate is a measurement of skeletal accretion.</p> <p>Growth is posited to compete for energy with reproduction and regeneration.</p>
Rationale	<p>Synchronous growth between unwounded and wounded corals indicates no apparant trade off with regeneration.</p> <p>Asynchronous growth among unwounded and wounded corals with the addition of elevated temperature indicates a temperature mediated trade-off.</p>
Hypotheses	<p>If energetic constraints are placed on growth, then growth rates between unwounded and wounded corals will be asynchronous.</p>
